Dear Team,

My background in technical writing and developer advocacy across Big Tech (Meta, Google) and high-growth Fintech (FIS, Nium) makes me a strong candidate. I specialize in "Docs-as-code" and building documentation that serves as the primary product surface for developers.

I'm particularly excited about your role because I'm a power user of LLMs and agentic workflows. I currently use Claude Code and MCP servers to build my own next-gen projects, so I understand firsthand how critical LLM-ready data is for the current wave of development. I don't just write about APIs; I read the codebase, run my own examples, and ensure that every code snippet works on the first copy-paste.

At Meta, I've been leading documentation for AR/VR Quest developer guides, including API references and CI-validated code samples. At FIS, I revamped fintech developer guides and created style guides specifically for training LLM systems. I thrive in small, fast-moving teams where roles are loosely defined and ownership is the default.

I have always preferred permanent positions but have taken interesting contracts recently. Here is the context on my recent transitions:

Year	Company	Reason for leaving
2026	Meta	Meta is downsizing AR/VR/Quest teams to pivot toward core AI.
2025	FIS	Required relocation to Seattle (two states away) and couldn't uproot my family.
2024	Netflix	Completed the contract; the 1.5-hour commute was unsustainable.
2023	Nium	Startup restructured and shifted the workforce to India.
2022	Yahoo	Contract ended after maximum extensions.

I am based in Alameda and wake at 5 am PT, so I am available for calls or collaboration across any timezone you need.

My portfolio is at guyklages.com/portfolio. I'm ready to jump in and help you maintain your lead as the fastest way to get LLM-ready data.

Thank you,
Guy
